Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of Group I, claims 1-19 in the reply filed on 7/25/05 is acknowledged. The traversal is on the ground(s) that the claimed subject matter has not been recognized as divergent subject matter. This argument is found persuasive and Groups I and II have been rejoined and claims 1-21 will be examined on the merits.

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zheng et al. in view of Thilderkvist et al.

In regard to claims 1-21, the Zheng et al. reference discloses a fluid control and gas delivery assembly comprising a "container" 11, a "fill path" 59, a "dispensing path" 55, a "first shut-off valve" 64, a "pressure reducer" 86, a "residual pressure valve" 10, a "purifier" 9, a "safety relief" 62, a "flow switch" 68, a "second shut-off valve" 69 and an "outlet connector" 70, but doesn't disclose having a fluid flow restrictor other than element 884. However, the Thilderkvist et al. reference discloses another fluid control

and gas delivery assembly having a fixed "fluid flow restrictor" (e.g., a manually adjustable needle valve) in line to achieve a desired flow restriction (see page 10, paragraph [0113], lines 7-17). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the Zheng et al. device to have a fluid flow restrictor in view of the teaching of the Thilderkvist et al. reference in order to a desired flow restriction within the line.
